

IILM UNIVERSITY, GREATER NOIDA

Summer Internship Presentation

Deloitte Australia

Data Analytics Job Simulation

Completed via Forage | Virtual Job Simulation

STUDENT NAME

Garima Singh

ENROLLMENT NO.

25SCS1003003257

PROGRAM

B.Tech CSE (2nd Year)

SEMESTER / SECTION

3rd Semester | 2CSE17

SESSION

2025 – 29

ORGANIZATION

Deloitte Australia

Internship Overview

A virtual, task-based simulation designed to mirror real Deloitte analyst work.

ORGANIZATION

Deloitte Australia

PLATFORM

Forage (Virtual Job Simulation Platform)

PROGRAM TITLE

Deloitte Australia Data Analytics Job Simulation

DOMAIN

Data Analytics

MODE

Virtual Job Simulation

COMPLETION DATE

August 22, 2026

The simulation involved completing two real-world-style analytics tasks used by Deloitte's Technology & Forensic teams — a Tableau-based data analysis task and an Excel-based forensic classification task — replicating the kind of work an entry-level analyst would perform.

Objectives

What this internship simulation aimed to build

Understand practical data analytics used in real business settings

Analyse real-world-style business datasets

Create meaningful data visualizations in Tableau

Develop an interactive Tableau dashboard

Perform Excel-based data classification

Improve analytical and problem-solving skills

Tools & Technologies

Software used to complete the two internship tasks

Tableau

Data visualization & interactive dashboard creation

Microsoft Excel

Formula-based data classification & analysis

GitHub

Version control and work documentation

Task 1 — Data Analysis

Analysing Daikibo telemetry data using Tableau

Dataset Overview

The Daikibo telemetry dataset records the operating status of devices across multiple factories, capturing when a device reports a healthy or unhealthy status.

Purpose

To estimate potential machine downtime across factories and device types, enabling data-driven identification of problem areas.

Process Followed

- 1 Import the Daikibo telemetry dataset into Tableau
- 2 Create a calculated measure named “Unhealthy”
- 3 Assign a value of 10 for every unhealthy status (10 minutes of potential downtime)
- 4 Build the “Down Time per Factory” bar chart
- 5 Build the “Down Time per Device Type” bar chart

Tableau Visualizations

Bar charts built from the Daikibo telemetry dataset

Figure 1: Down Time per Factory visualization

Figure 2: Down Time per Device Type visualization

Each chart aggregates the “Unhealthy” measure to show total estimated downtime, broken down by factory and by device type respectively.

Tableau Dashboard

An interactive dashboard combining both charts, with the factory chart configured as a filter.

Figure 3: Interactive Tableau Dashboard

- Both charts — Down Time per Factory and Down Time per Device Type — were combined into a single Tableau dashboard.
- The factory chart was configured to act as a filter.
- Selecting a factory on the chart filters the device-type chart to show only that factory's data.
- This makes it easy to investigate downtime patterns at a specific factory in a single view.

Task 2 — Forensic Technology

Working with the Equality Table dataset in Excel

Dataset: Equality Table.xlsx

The dataset contained the following columns:

Factory

Location where the job role is based

Job Role

Position being assessed

Equality Score

Numeric score indicating pay/role equality

A fourth column, “Equality Class,” was created to classify each score.

Classification was required to convert a raw numeric score into a clear, interpretable category — making it easier to quickly identify roles or factories where equality scores signalled a potential concern.

Equality Score Classification

Classification logic applied to the Equality Score column

Absolute Equality Score	Classification
≤ 10	Fair
> 10 and ≤ 20	Unfair
> 20	Highly Discriminative

EXCEL FORMULA

```
=IF (ABS (C2)<=10,"Fair",IF (ABS (C2)<=20,"Unfair","Highly Discriminative"))
```

Examples

-5 → Fair 3 → Fair -19 → Unfair -25 → Highly Discriminative

Figure 4: Equality Score Classification in Excel

Key Learnings

Skills gained through this internship simulation

Data Analysis

Data Visualization

Tableau Dashboard Creation

Excel Formulas

Data Interpretation

Analytical Thinking

Business Problem Solving

Presenting Insights

Conclusion

The Deloitte Australia Data Analytics Job Simulation, completed through Forage, provided valuable practical exposure to real-world-style data analysis and visualization. Working through the Tableau telemetry task and the Excel forensic classification task helped build a clearer understanding of how analytical tools such as Tableau and Excel are used to support business decision-making — from identifying downtime patterns across factories to classifying equality scores for further investigation. Overall, this simulation strengthened practical, job-ready analytical skills relevant to a career in data analytics.

Certificate of Completion

Deloitte Australia Data Analytics Job Simulation —
Forage

Thank You

Garima Singh

25SCS1003003257

Deloitte.

GARIMA SINGH **Data Analytics Job Simulation**

Certificate of Completion
August 22nd, 2026

Over the period of August 2026, GARIMA SINGH has completed practical tasks in:

Data analysis
Forensic technology

Tina McCreery
Chief Human
Resources Officer,
Deloitte

Enrolment Verification Code 6a89d675841fddedde7e7b4ef | User Verification Code 6a8092576dfcb5ce71f273ed | Issued by Forage

Certificate of Completion — Deloitte Australia Data Analytics Job Simulation
